

Beyti System - Testing Guide

Project Overview

This document provides step-by-step instructions for testing the Beyti marketplace system, focusing on the Admin Module, Service Provider Module, and Notification System.

Prerequisites

- SQL Server Management Studio (SSMS)
 - Node.js installed
 - Command Prompt (Administrator access)
-

Setup Instructions

Step 1: Database Setup

1. Open **SQL Server Management Studio (SSMS)**
2. Create a new database named **Beyti-V1**
3. Execute the provided SQL schema file to create all tables and insert initial data
4. Verify the database connection is successful

Important: The database name must be exactly **Beyti-V1** for the application to connect properly.

Step 2: Running the Frontend Application

1. **Open Command Prompt as Administrator**
 - Right-click on Command Prompt
 - Select "Run as administrator"
2. **Navigate to the frontend folder**

```
cd [path-to-beyti-frontend-folder]
```

Example: `cd "C:\Users\User\OneDrive\Documents\GitHub\Beyti-platform\beyti-frontend"`

Start the development server

```
npm run dev
```

4. **Open the application**
 - Wait for the server to start

- The console will display a localhost URL (typically http://localhost:5173)
- Open this URL in your web browser

Important Note: Navigation Workaround

Due to incomplete authentication implementation by team member, the system uses a temporary navigation bar at the top of the page to switch between different user roles.

Testing Guide by Module

Module 1: Admin Module

Accessing Admin Dashboard

1. Use the **navigation bar** at the top of the page
2. Click on "**Admin Module**"

Hardcoded Credentials

- **User:** Mohamed Alderazi
- **UserProfileId:** 21
- **AdminProfileId:** 1

Features to Test

Dashboard:

- View platform statistics (Total Users, Revenue, Pending Approvals, Flagged Users)
- Check user growth by role type
- Review latest audit logs
- Test quick actions buttons

User Management:

- View all users with filtering by role
- Edit user details
- Activate/Deactivate user accounts
- View user details modal

Request Approvals:

This part must be completed after the registration done by my teammate (Ali), but because he did not complete it, I made hardcoded application with no deep and complex way. Just the basic details, no license or certificates.

- Review pending service provider applications
- Approve/Reject membership requests

Flagged Users:

- View users with policy violations
- Send warnings to flagged users
- Suspend users for inappropriate content
- Review suspended users list

Category Management:

- Create new categories and subcategories
- Edit existing categories
- Activate/Deactivate categories
- View category listings

Announcements:

- Send announcements to specific roles or all users
- Verify announcement delivery
- Check announcement history

Audit Logs:

- View all admin actions
- Filter by event type and severity

Notifications:

- View received notifications
- Mark notifications as read
- Clear notification history

Module 2: Service Provider Module

Accessing Service Provider Dashboard

1. Use the **navigation bar** at the top
2. Click on "**SP Dashboard**" (Service Provider Dashboard)

Hardcoded Credentials

- **Business Name:** Pro Tutors Bahrain
- **UserProfileId:** 15

Features to Test

Dashboard:

- View today's bookings count
- Check current rating
- Review pending requests (with alerts if any)
- Monitor total earnings
- View today's schedule
- Read recent reviews
- Test quick actions

My Services:

- Add new service listings
- Edit existing services
- Activate/Deactivate services

Booking Requests:

- View weekly schedule
- Accept/Reject pending booking requests
- Mark bookings as "In Progress"
- Complete bookings and enter payment details
- View all bookings history

Availability Schedule:

- Add weekly time slots
- Activate/Deactivate availability
- View schedule calendar

Reviews Management:

- View received reviews
- Respond to customer reviews

Notifications:

- Receive real-time booking notifications
 - View notification history
 - Mark notifications as read
-

Module 3: Customer View & Booking Flow**Accessing Customer View****Step 1: Navigate to Service Providers**

1. Click on "**Service Providers**" in the navigation bar
2. This shows the customer view of all service providers

Step 2: Login as Customer (Hardcoded)

1. Go to "**Seller Stores**" in the navigation
2. Click "**Login**" at the top right
3. Select user: "**Ali Hassan**"
 - This is a hardcoded customer account
4. Go back to "**Service Providers**" in the navigation bar

Step 3: Browse and Book Services

1. Browse available service providers
2. View service details
3. Select a service to book
4. Choose available time slot
5. Submit booking request

Note: There is one minute timer to accept the booking.

Step 4: Test Complete Workflow

1. As customer (Ali Hassan): Create a booking request
2. Switch to SP Dashboard (Pro Tutors Bahrain)
3. Accept the booking request

4. Mark booking as "In Progress"
 5. Complete the booking and enter payment
 6. Switch back to customer view
 7. Leave a review for the completed service by accessing "My Orders" from the Profile dropdown and "Services" tab.
 8. Switch to SP Dashboard to view and respond to the review
-

Testing the Notification System

Real-Time Notification Testing

Make a duplicate of the web, split the page to test real-time notifications and update

Test 1: Booking Request Notifications

1. As customer: Submit a booking request
2. Verify notification appears within 5 seconds
3. Check notification bell icon updates

Test 2: Status Change Notifications

1. As service provider: Accept a booking
2. Verify acceptance notification received
3. Repeat for "In Progress" and "Completed" statuses

Test 3: Admin Notifications

1. As admin: Approve a pending service provider
 2. Verify approval notification received
-

Known Limitations

1. **Authentication System:** Not implemented - using hardcoded users and navigation bar
 2. **Seller Module:** Implemented by another team member - use "Seller Stores" for testing
 3. **Driver Module:** Implemented by another team member
 4. **Payment Integration:** Not implemented - using manual payment entry
-

Troubleshooting

Database Connection Issues

- Verify database name is exactly Beyti-V1
- Check connection string in application configuration
- Ensure SQL Server is running

Frontend Not Starting

- Verify Node.js is installed
- Install dependencies: npm install
- Clear cache: npm cache clean --force
- Retry: npm run dev

Notifications Not Appearing

- Verify SignalR connection established
- Refresh the page and retry action

Navigation Bar Not Visible

- Ensure you're on a valid page
- Refresh the browser
- Check browser zoom level (should be 100%)
